SUMMARY

Full Stack Developer with nearly 2 years delivering production-grade web and mobile applications across the full stack – from database schema design to cloud deployment. Proficient in Python (FastAPI), React.js, Flutter, PostgreSQL, and AWS. Experienced in building scalable REST APIs, migrating desktop apps to cloud, event-driven pipelines, and shipping mobile apps with payment integration. Thrive in small product teams where end-to-end ownership matters.

TECHNICAL SKILLS

Languages	Python, JavaScript, TypeScript, Dart, SQL
Backend	FastAPI, REST APIs, JWT Auth, Apache Kafka, Celery
Frontend / Mobile	React.js, Next.js, Flutter, Tailwind CSS, Electron, HTML, CSS
Databases & Cache	PostgreSQL, Redis
Cloud & DevOps	AWS (EC2, S3, SES), Render, Docker, Nginx, GitHub Actions (CI/CD), Git
Integrations	Razorpay, SendGrid, Figma

EXPERIENCE

Edsols Innovations

Bengaluru, India

- Associate Software Engineer – Full Stack Jan 2026 – Present
- Junior Full Stack Developer Jan 2025 – Dec 2025
- Full Stack Developer Intern Nov 2024 – Dec 2024

- Designed and shipped the **company marketing website** in React.js and Tailwind CSS within 3 weeks; built the **EMR patient onboarding module** and authored the foundational PostgreSQL schema the entire platform was built on. (*Intern*)
- Architected and shipped **Lingooleap** – a gamified therapy platform for children with autism and speech disabilities – delivering 10+ therapy modules, automated patient onboarding, and clinical report generation. (*Junior*)
- Designed an **automated assessment pipeline**: auto-generates a Baseline Report after 4 sessions; subsequent sessions produce Therapy Progress Reports with session-level analytics on the therapist dashboard.
- Led **Electron-to-cloud migration**: rebuilt the desktop app into a fully cloud-hosted React.js web platform (AWS EC2 + S3) with 100% device accessibility.
- Built **20+ Python/FastAPI REST APIs** for session management, records, and reporting; designed normalized PostgreSQL schemas with **role-based JWT auth** (Doctor / Therapist / Admin); integrated AWS SES to automate report emails, cutting manual distribution effort by ~80%.
- Leading the **Lingooleap Parent Mobile App** in Flutter, achieving 100% API reuse from the existing Python/FastAPI backend. (*Current*)
- Engineered **Razorpay in-app payment integration**, enabling subscription management and eliminating 100% of manual payment handling. (*Current*)

PROJECTS

E-Commerce API with Payment Integration & Order Pipeline

github.com ↗

Tech Stack: Python, FastAPI, PostgreSQL, Redis, Celery, Razorpay, Docker, Render, GitHub Actions

- Built a multi-tenant REST API covering product catalogue, cart, orders, inventory, and Razorpay checkout with webhook-driven order confirmation; offloaded post-payment workflows (invoices, stock sync, email receipts via SendGrid) to **Celery + Redis** task queues, reducing synchronous p99 response time by ~60%.
- Containerized with Docker and deployed on Render via GitHub Actions CI/CD, fronted with Nginx rate limiting to protect public API endpoints.

Distributed Task Scheduler & Notification Engine

github.com ↗

Tech Stack: Python, FastAPI, Celery, Redis, Kafka, PostgreSQL, React.js, Docker, Render, Nginx

- Architected an async job-execution service using FastAPI, Celery, and Redis with retry policies and dead-letter handling; Kafka pipeline fans out real-time alerts via email and webhook channels, sustaining **1,000+ task events/min** in load tests.
- React.js control dashboard backed by a PostgreSQL audit log; fully containerized with Docker and deployed on Render behind an Nginx reverse proxy.

EDUCATION

B.E. Computer Science and Engineering

2019 – 2023

Bannari Amman Institute of Technology

CGPA: **9.08 / 10**
